

QuickStart Guide

Publish and Share in Kaltura

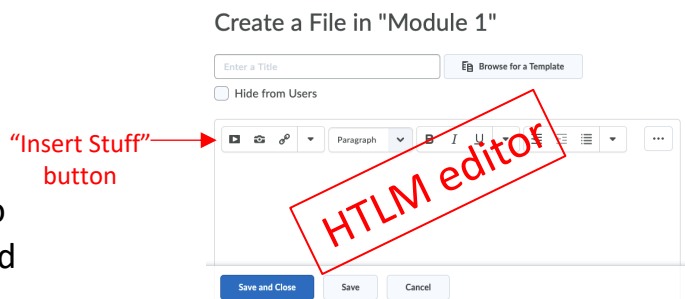

KALTURA

All your video content will reside in your "My Media" collection. From there it can be shared and organized in several ways.

Embed into in D2L content areas:

Your videos can be embedded directly into items you create in D2L, such as announcements, files, assignments, and discussions.

- Within the HTML editor for any D2L object, select the "Insert Stuff" option.
- Browse Kaltura's MyMedia to select the video you need and then click "insert" button.
- Set release dates and conditions and select "Publish" to make the video active. It should now appear within your D2L content area.

- Notes: As an alternative to browsing your existing media you may also select "Add New" to record or upload new content to your "My Media" area

Sharing with a link:

- From "My Media", select a video to share.
- Select the "Share" tab to reveal a direct URL.
- Copy the link and distribute it as you wish.
- To share just part of a video, set the Start and End times before copying the link.
